INTERACTIVE LABS: COHORT REPORT

TEST RUN

Backend test | 2026-11-10 | Session XK4S8

PARTICIPATION

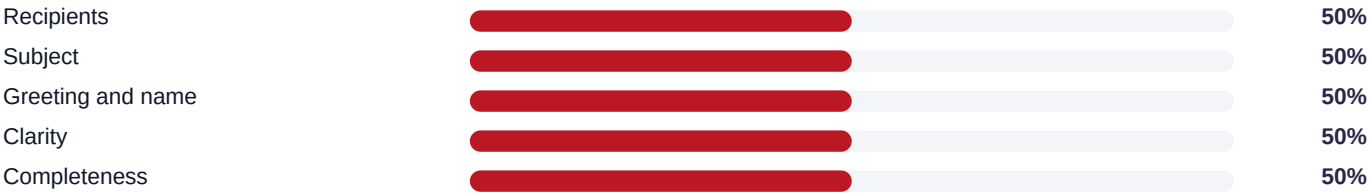
2 joined. 2 completed Lab 1. 2 submitted both Lab 2 emails.

Key: counts from the live session. Completion means at least one Lab 1 answer, and two non-empty Lab 2 emails.

LAB 1: CHOOSING THE RIGHT CHANNEL

Average Lab 1 score: 490 points. Planted mistakes caught: 50%. Channel judgement: 44%.

Mistakes most often missed



Key: share of participants who did not flag a planted mistake of that type in Spot the Slip.

How the room split on each channel situation

Delivery delay (best: Call)

Monthly report (best: Email)

Running late (best: Message)

Colleague's numbers (best: Face to face or Call)

Client order change (best: Email)

Safety hazard (best: Face to face or Call)

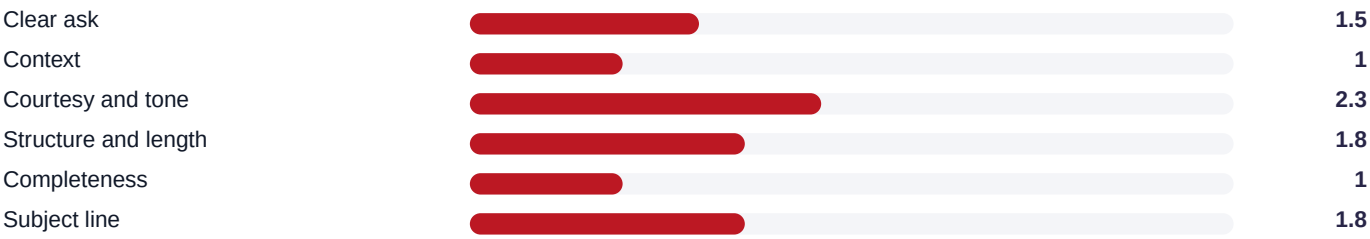
Quick yes or no (best: Message)

Missing a deadline (best: Face to face)

Key: green is the best answer, grey is any other choice. Width shows the share of the room.

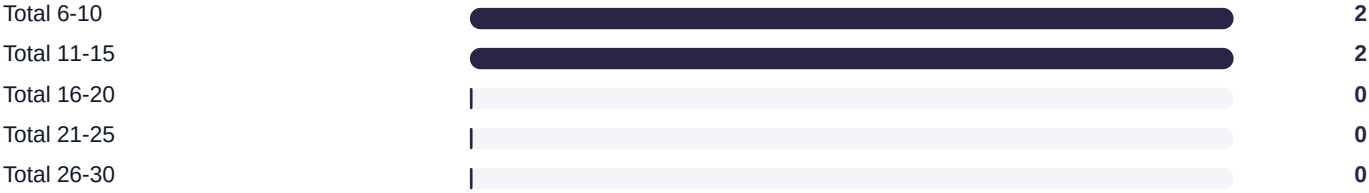
LAB 2: WRITING WITH RESPECT

Cohort average total: 9.3 out of 30.



Key: AI-scored average per rubric area, 1 to 5. 1 = development priority, 3 = adequate, 5 = strong.

Distribution of email totals



Key: number of scored emails falling in each total band (6 to 30).

Peer versus AI: across 2 reviewed emails, table totals were on average 9 points above the AI total (average absolute gap 9).

Key: peer scores and AI scores are kept separate. This compares the two on the same emails.

COMMON STRENGTHS

- Courtesy and tone was the most developed area in written practice, giving a friendly, respectful base to build on (small cohort of two).
- Both participants chose a conversation (call or face to face) for the numbers disagreement, and for the missed deadline, showing instinct for sensitive topics.
- Half of the planted slips were caught in the proofreading lab, showing a solid starting point for checking before sending.

COMMON DEVELOPMENT AREAS

- Context and completeness scored lowest of the six writing areas; messages often leave out the why, the detail or the date the reader needs.
- Urgent or formal situations are still developing: the site hazard was handled in writing, and the client change record by call or message.
- Recipients, subject, greeting, clarity and completeness slips were each missed by half; peer scores ran well above AI scores, so self-calibration needs work.

Key: written from aggregated, anonymous data only.

RECOMMENDATIONS FOR THE 30-DAY CHECK-IN

- Ask which channel they chose recently and why. Practise a simple rule: urgent or safety means speak now; formal agreements mean email.
- Review one real email together using a short checklist: recipients, subject line, one clear ask, context, and a date.
- Discuss the gap between peer and AI feedback. Ask what each rater noticed, and invite them to rewrite one message using the AI fixes.

RECOMMENDATIONS FOR LINE MANAGERS

- Share your team's norms for channels, such as when you expect a call, a message or an email, especially for urgent and safety matters.
- Give brief, specific feedback on early emails, focusing on context, a clear ask and a deadline with the reason, rather than general comments.
- Encourage them to write requests in their own words, not templates, and to raise delays or problems with you early in person.

APPENDIX: PARTICIPANT SCORES

Name	Table	Lab 1	Lab 2	Ask	Context	Tone	Structure	Complete	Subject
Test Ayesha	1	499	8.5	1.5	1	2	1.5	1	1.5
Test Bilal	2	481	10	1.5	1	2.5	2	1	2

Key: Lab 1 = total points. Lab 2 = average total of two emails (out of 30). Area columns = average of two emails (1 to 5).
